Govardhan Reddy C

Cloud and DevOps Engineer | +91 95151 40448 | govardhanr689@gmail.com | India | linkedin.com/in/govardhan-reddy-cidde-a02699337 | github.com/cgr258

SUMMARY

DevOps and Cloud Engineer profile with 4+ years of enterprise operations, production support, alert monitoring, risk/compliance operations, SLA management, investigation, escalation handling, QA review, and audit-ready documentation experience. Skilled in AWS, Azure, GCP, Terraform administration, Terraform Enterprise, Terraform Cloud, Kubernetes administration, on-prem and cloud infrastructure support, CI/CD automation, Azure DevOps, Jenkins, Git, Linux, Python, Bash, SQL, IAM, user management, network design, database administration, monitoring, security scanning, and incident management. Strong understanding of Infrastructure as Code, cloud networking, Kubernetes workloads, Helm charts, DevSecOps practices, vulnerability management, access governance, log analysis, monitoring dashboards, release support, change management, root-cause analysis, and recurring issue prevention. Experienced in working with high-volume alerts, production issues, priority escalations, false-positive mitigation, compliance controls, and process improvements in deadline-driven environments.

SKILLS

- **AWS Services:** EC2, S3, IAM, VPC, Subnets, Route Tables, Security Groups, NACLs, NAT Gateway, Internet Gateway, Elastic Load Balancer, Auto Scaling, EKS, ECS, ECR, RDS, Lambda, Route 53, CloudWatch, CloudTrail, AWS Config, Systems Manager, Secrets Manager, KMS, GuardDuty, Security Hub, SNS, SQS.
- **Azure Services:** Azure Virtual Machines, Azure Virtual Network, Subnets, NSG, Route Tables, Azure Load Balancer, Application Gateway, Azure DNS, Azure Storage Account, Azure Blob Storage, Azure Files, Azure AD / Microsoft Entra ID, RBAC, Azure Key Vault, Azure Kubernetes Service, Azure Container Registry, Azure Monitor, Log Analytics Workspace, Azure SQL Database, Azure Data Factory, Azure Databricks, Azure Defender for Cloud, Recovery Services Vault, ADLS.
- **GCP Services:** Compute Engine, Cloud Storage, IAM, VPC, Subnets, Routes, Firewall Rules, Cloud NAT, Cloud Load Balancing, Managed Instance Groups, GKE, Cloud Run, Artifact Registry, Cloud SQL, Cloud DNS, Cloud Monitoring, Cloud Logging, Cloud Audit Logs, Cloud Asset Inventory, Secret Manager, Cloud KMS, Security Command Center, Pub/Sub, Filestore, BigQuery, Dataflow, and Cloud Functions.
- **Terraform / Infrastructure as Code:** Terraform administration, Terraform Cloud, Terraform Enterprise, Terraform CLI, Terraform modules.
- **Kubernetes / Containers:** Kubernetes administration, Docker, AKS, EKS, ingress, CRD, KEDA, HPA, rollback, Helm chart.
- **CI/CD Tools:** Azure DevOps, Jenkins, GitHub Actions, Git, GitHub, GitLab, YAML pipelines.
- **DevSecOps / Security Scanning:** SAST, DAST, SCA, SonarQube, Snyk, Trivy, Azure Defender for Cloud, AWS Security Hub, GuardDuty, IAM Access Analyzer.
- **Security / IAM / Access Management:** AWS IAM, Azure RBAC, Azure AD / Entra ID, IAM policies, Key Vault, AWS Secrets Manager, KMS, audit logs, CloudTrail.
- **Networking:** AWS VPC, Azure VNet, CIDR planning, subnetting, public/private subnets, route tables, DNS, DHCP, NAT, firewall rules, VPN, VPC peering, VNet peering, Transit Gateway, private endpoints, security groups, NACL, NSG, load balancers, application gateway.
- **Monitoring / Observability:** Prometheus, Grafana, Alertmanager, AWS CloudWatch, Azure Monitor, Log Analytics, Container Insights, metrics, logs, alerts, dashboards, SLA monitoring, RCA.
- **Database Administration:** SQL, MySQL, PostgreSQL, AWS RDS, Azure SQL Database.
- **Scripting / Automation:** Python, Bash, Shell scripting, SQL scripting, YAML, JSON.
- **Operating Systems:** Linux administration, Windows server.
- **ITSM / Support:** L1 support, L2 support, L3 escalation support, production support, application support, infrastructure support, cloud support.

WORK EXPERIENCE

Cloud DevOps Engineer | Mphasis Hyderabad, India | Jan 2025 - Present

- Managed cloud infrastructure operations across AWS, Azure and GCP, supporting compute, storage, networking, IAM, monitoring, and security services in production environments.
- Administered AWS EC2, S3, VPC, IAM, Security Groups, NACLs, Route Tables, Load Balancers, Auto Scaling, RDS, CloudWatch, CloudTrail, and Systems Manager for application and infrastructure support.
- Supported Azure Virtual Machines, Azure VNet, NSG, Route Tables, Azure Storage, Azure Key Vault, Azure Monitor, Log Analytics, Azure SQL Database, and Azure Kubernetes Service for enterprise workloads.
- Supported GCP Compute Engine, Cloud Storage, VPC, IAM, Firewall Rules, Subnets, Routes, Cloud Load Balancing, Cloud SQL, Cloud Monitoring, Cloud Logging, Cloud DNS, and Google Kubernetes Engine (GKE) for application and infrastructure support
- Worked on Terraform administration using Terraform CLI, Terraform Cloud, Terraform Enterprise, modules, variables, state files, workspaces, plans, applies, drift checks, and backend configuration.
- Assisted in provisioning and maintaining infrastructure using Infrastructure as Code, ensuring consistent deployment standards across development, testing, staging, and production environments.
- Supported Kubernetes administration activities including pod troubleshooting, deployment validation, service checks, ingress verification, ConfigMap and Secret updates, rollout monitoring, and rollback support.
- Worked with AKS and EKS clusters, including node pools, namespaces, RBAC, service accounts, workloads, autoscaling, logs, events, and container-level troubleshooting.
- Created and maintained Helm charts for application deployment, environment-specific configuration, values files, release upgrades, rollback, and repeatable Kubernetes deployments.
- Supported CI/CD pipelines using Azure DevOps, Jenkins, GitHub Actions, Git, GitHub, GitLab, and YAML pipelines for build, test, deployment, and release automation.
- Participated in deployment support, release validation, change implementation, rollback coordination, and post-deployment monitoring using Azure DevOps, Jenkins, Kubernetes, CloudWatch, and Azure Monitor.
- Performed cloud networking troubleshooting across AWS VPC, Azure VNet, CIDR ranges, subnets, route tables, NAT Gateway, Internet Gateway, VPN, peering, NSG, Security Groups, NACLs, DNS, and load balancers.
- Supported IAM and access governance using AWS IAM, Azure RBAC, Microsoft Entra ID, Key Vault, Secrets Manager, KMS, audit logs, and least-privilege access controls.

- Assisted in security scanning and DevSecOps activities using SonarQube, Snyk, Trivy, AWS Security Hub, GuardDuty, Azure Defender for Cloud, secret scanning, container scanning, and dependency scanning.
- Used Python, Bash, Shell scripting, YAML, JSON, and SQL to automate operational checks, reporting tasks, log validation, and repetitive infrastructure support activities.
- Investigated infrastructure and application issues using Linux commands, system logs, CloudWatch Logs, Azure Log Analytics, Kubernetes logs, Prometheus metrics, and Grafana dashboards.
- Maintained operational documentation, SOPs, deployment notes, troubleshooting steps, RCA documents, and audit-ready evidence for cloud and DevOps support activities.

Cloud Engineer | Cognizant Technology Solutions **Hyderabad, India | Apr 2022 - Aug 2024**

- Delivered SLA-driven production support in high-volume operations environments, handling alerts, incidents, service requests, escalations, and compliance-related activities.
- Monitored production alerts using CloudWatch, Azure Monitor, Prometheus, Grafana, Alertmanager, Log Analytics, and internal monitoring tools to identify service degradation and infrastructure issues.
- Performed alert triage, issue validation, priority classification, impact analysis, escalation handling, and follow-up coordination with application, infrastructure, security, and business teams.
- Investigated recurring production issues by reviewing logs, metrics, error patterns, deployment history, configuration changes, and infrastructure health using Linux, SQL, CloudWatch, Log Analytics, and Grafana.
- Collaborated with L1, L2, L3, cloud, DevOps, security, database, and application teams to resolve production incidents and reduce repeated failures.
- Performed root-cause analysis for incidents involving application failures, network connectivity, access issues, performance alerts, failed deployments, and infrastructure resource problems.
- Worked in controlled production environments requiring strict accuracy, confidentiality, SLA discipline, documentation quality, compliance awareness, and risk-based decision making.
- Improved operational efficiency by documenting repeated issues, updating SOPs, refining troubleshooting steps, reducing manual effort, and supporting automation opportunities.
- Maintained strong coordination with global support teams for high-priority incidents, production escalations, compliance alerts, and business-impacting issues.

PROJECTS

Multi-Cloud Infrastructure Automation - Terraform Cloud / Terraform Enterprise

- Designed reusable Terraform modules for AWS,Azure and GCP infrastructure including VPC, VNet, subnets, route tables, compute, storage, databases, IAM, and RBAC.
- Managed Terraform Cloud/Terraform Enterprise workflows using workspaces, remote state, state locking, variable sets, private module registry, and policy-as-code.
- Integrated Terraform plan/apply workflows with CI/CD pipelines, approval gates, drift checks, and deployment troubleshooting.

Kubernetes Administration - AKS, EKS, GKE, On-Prem and Helm

- Administered Kubernetes workloads using kubectl, namespaces, pods, deployments, services, ingress, ConfigMaps, Secrets, RBAC, and HPA.
- Created and supported Helm charts for environment-based deployments, upgrades, rollbacks, and release management.
- Troubleshot pod failures, CrashLoopBackOff, ImagePullBackOff, Pending pods, DNS issues, service connectivity, and ingress routing issues.

CI/CD Automation - Azure DevOps and Jenkins

- Built CI/CD pipelines for build, test, security scan, artifact creation, Terraform plan, deployment, approval, and rollback.
- Supported Jenkins and Azure DevOps pipeline troubleshooting by reviewing logs, dependency failures, permission issues, variables, and deployment errors.
- Followed Git branching, pull request, release management, change management, and deployment validation practices.

Monitoring and Observability

- Created monitoring dashboards and alert rules using Prometheus, Grafana, CloudWatch, Azure Monitor, and Log Analytics.
- Monitored CPU, memory, disk, network, pod restarts, node health, deployment failures, service availability, and application errors.
- Supported incident triage, SLA monitoring, RCA, recurring alert analysis, and operational reporting.

DevSecOps and Cloud Security

- Integrated SAST, DAST, dependency scanning, container scanning, secret scanning, IaC scanning, and vulnerability scanning into CI/CD workflows.
- Identified security risks such as open ports, public access, weak IAM policies, exposed secrets, missing encryption, and misconfigured infrastructure.

CERTIFICATION

- AWS Certified CloudOps Engineer – Associate
- Microsoft Certified: Azure Administrator Associate
- Awarded Best Team Member (2x) by client for outstanding support delivery.
- Received On-Spot Award for reducing incident count to zero and improving operational efficiency.
- Consistently appreciated by clients for proactive issue resolution, automation, and service excellence.

EDUCATION

- Bachelor of Sciences - 2020, Sam Higginbottom University of Technology and Sciences, Prayagraj, CGPA: 7.2
